# McGRATH<sup>®</sup> SERIES 5

Portable  
Video  
Laryngoscope

## Portable Video Laryngoscope

The **McGRATH<sup>®</sup>** Series 5 displays a crystal clear picture of the larynx during intubation. Aircraft Medical has developed an advanced imaging technology to pioneer a new generation of video laryngoscope.

Designed to minimize the lifting force necessary for successful intubation, the elegant and highly ergonomic design offers you a laryngoscope that is more comfortable for both patient and user. Optimal structural performance is achieved with a high quality polymer blade that sleeves over a reinforced CameraStick™. Patients benefit from a single-use blade that is supplied sterile and free from risk of cross-infection.

With the ability to share the experience 'on screen', the **McGRATH<sup>®</sup>** can help to accelerate training and eliminate the feeling of isolation in difficult cases.

## Key Features

- On board camera system
- Full colour picture
- Single standard AA battery
- No external cables
- Adjustable size optical blade
- Robust single-use blade
- Difficult intubation aid
- Training aid

## Perfectly balanced

The world class design engineering team at Aircraft Medical wanted to achieve something remarkable: a fully enabled, video laryngoscope with no external cables that can run for 1 hour on a single AA battery. They succeeded. Perfect weight distribution means that the device sits balanced in your hand. The team has also achieved the optimum balance of build quality and twenty-first century precision, materials and technology.

The **McGRATH<sup>®</sup>** Series 5 is a product dedicated to meeting the modern clinical needs of healthcare professionals and patients. Invention and new technology have been carefully introduced to create a product that strikes the right balance in maintaining traditional airway skills while embracing advanced technology and a new approach.

The **McGRATH<sup>®</sup>** Series 5 has been designed to enhance your skills as a specialist.
